

# BL1500

## EV Battery / Table Lift

The Hofmann Megaplan BL1500 provides the ultimate in flexibility for a variety of workshop lifting requirements – engines, gearboxes and now Electric Vehicle batteries.

Safe access and removal of the vehicle battery is an obvious lifting conundrum being presented to garages with the introduction of EVs. If you are ready to equip your workshop of the future, Hofmann Megaplan has the solution.

The BL1500, our flagship EV battery/table lift, uses a powerful hydraulic system to lift up to 1500kg and incorporates a twin-plane automatically tilting table top for the ultimate flexibility when positioning and fixing a heavy component under a vehicle. Of course, this versatile lift is not restricted to use with EV batteries, it also provides an ideal solution for other workshop lifting challenges, including engines and gearboxes.

Perfect for  
EV batteries,  
engines and  
gearboxes!

### KEY FEATURES

- Powerful hydraulic lift with electric tilting
- 1500kg lifting capacity
- No installation required
- 900mm x 1728mm table top - extendable to 2027mm
- Lifting height 740mm to 1800mm
- Twin-plane tilting table top provides the ultimate alignment flexibility with battery/vehicle component
