

MEGACHECK

INSPECTION SYSTEM

megaCheck is a drive-through system that provides instant tyre tread and alignment readings in just seconds.

With no clamps, targets or sensors, the megaCheck is an effortless means of capturing valuable data which can, in turn, be used to generate valuable revenue through resulting wheel alignments and tyre sales.

KEY FEATURES

■ Complete tread depth and wheel alignment inspection

A complete inspection of tyre tread depth and the wheels' geometry in a few seconds, including toe and camber readings, indicating any irregularities to be corrected.

■ No-contact analysis

Carries out an analysis of the vehicle's alignment without contact with the rims and providing effective time savings.

■ Immediate vehicle identification

Individual vehicle specifications are automatically recognised thanks to a database updated in real time, or through an optional Automatic Numberplate Recognition (ANPR) system.

■ Fast report generation

Generates a simple to understand report, enabling you to share the results with your customer, either by printed report, or via the 'Click and Share' option, directly via smartphone and tablet.

SITE REQUIREMENTS

- Minimum Wi-Fi connection speed: 4Mbps.
- Drive-through width requirement: 4.2m-4.8m (13.8ft-15.8ft).
- 240V AC power supply.
